Inventor(s): HASEGAWA NORIAKI
Application No. 06227539 JP06227539 JP, Filed 19940922,

Abstract: PURPOSE: To attract user's attention previously by outputting a warning message when a message meets a specific condition.

CONSTITUTION: When the message deciding means 2a of a message confirmation part 2 judges that a message from a message request part 1 is a general message, a setting condition deciding means 2b refers to a table 4 by using the identification code of the received message and compares it with respective set message identification codes(ID) 4a. When the received message is present in the table 4, the corresponding final output time 4b is taken out and the difference from the current time of a timer 6 is found. When the difference meets the conditions (important conditions) of the output internal information 4c of the message, a code showing that the message is important, is added and the message is supplied to a message output part 3. Further, the message output part 3 outputs the message to a display part.
